Please proceed to the event area in the SOUTH-bound lane of McKillip Road.

ENTRANCE ONLY

NO LEFT TURNS FROM MCKILLIP RD.

Traffic flow will be from the NORTH on McKillip Road.

EXIT ONLY
NO ENTRANCE FROM WELCHVILLE ROAD

MANAGING LEFTOVER PAINT

Did you know that an average of ~2 gallons of household paint are sold for each person in the US every year?

While paint is a regular part of our homes and lives, too much of that paint ends up in US landfills because people needlessly throw it away.

Paint should never be thought of as a “waste” product. The use of paint itself does not create waste. When paint is stored properly, it can last for years.

SIX WAYS YOU CAN HELP PROTECT THE ENVIRONMENT

These tips can help you avoid creating or improperly disposing of leftover paint. Please remember that there are many environmentally friendly options available for managing leftover paint, and **disposal should be your last option.**

#1 ONLY BUY WHAT YOU NEED

When you buy only what is needed, there is no leftover to worry about. This is called “source reduction”.

#2 RECYCLE THE EMPTY CAN

This is as easy as recycling aluminum soda cans. Each can you recycle is one less item in the landfill.

#3 STORE PAINT FOR FUTURE PROJECTS

Ensure the top fits properly to avoid leaks. Store the can upside down to create a seal, keeping the paint fresh until you need it again for touch ups or other projects.

#4 DONATE IT

Inquire about donating usable leftover paint to churches, community groups, etc., before considering disposal.

#5 DRY LEFTOVER LATEX PAINT & DISCARD

Allow latex paint to air-dry, preferably away from children and pets. You can add dry cat litter, shredded newspaper or wood chips to expedite drying. Once the paint is dry, it can be included in your solid waste disposal options.

#6 SAVE LEFT OVER SOLVENT-BASED PAINT

Solvent-based paint should not be discarded. Save it for a Household Hazardous Waste (HHW) collection event in your community.
